

# Danmark til SDG eksamen - arbejde med statistisk anneks

27. juni 2017

Niels Ploug

# Agenda

- Global challenges in the statistical follow-up
- Statistical annex to the Danish Voluntary National Review
- Statistics Denmark and the way forward

# Global challenges in the statistical follow-up

- Huge variety of data availability across the countries
  - Mature statistical systems indicate availability of data for around 30 per cent of the indicators . less mature systems indicate the same percentage . credible?
- Pattern of data flows still not decided . what will be the final role of the NSOs, International Agencies, FN Regional Bodies (UNECE) and non-official data producers?
- How do we target capacity-building?

# Statistical annex to the Danish Voluntary National Review

- Short time for compilation necessitated some priorities:
  - Main focus on data available in Statistics Denmark;
  - Time series covering 2005-2015;
  - Where possible international comparability
- Challenges
  - Still many indicators without a clear definition;
  - The global aspect of the indicators . not always fully relevant for Denmark;
  - Not so many comparable data across the countries . mainly EU . how can the global comparability be improved with time?

# Way ahead (1)

- The next steps for producing global data for Denmark:
  - Thorough mapping of data availability building on the one conducted in 2016;
  - Establishing an IT platform for data reporting;
  - Clarification whether Statistics Denmark should be the contact point for data requests from International Agencies (preferable);
  - Discussions and consultations on the shape of the next report (we are aiming at a state of the art);

## Way ahead (2)

- Clarification of data flows in Denmark;
- Dialogue with non-official data producers in order to ensure a broader data coverage in Denmark;
- Cooperation on Nordic reporting;
- International involvement . targeting and contributing to concrete work on international level.

# Q and A
